

Cat Face

Draw a circle and divide into 8 equal sections through the center.

The eyes should roughly be level with the horizontal center line.

Draw a line running across the top of the eyes and the inside corner of the eyes. These will give you the outer corners of the nose, the top border of the ears, and the outer corner of the ears.

The lines running at 45 degrees give us the approximate midline of the ears.

Start with an oval and divide it into quarters.

The bottom of the eye should roughly be level with the horizontal center line, approximately halfway between the center and outer edge of the oval.

Draw a line between the points where the vertical and horizontal lines cross the oval. This gives us the front edge of the ear and the angle of the nose.

Draw your mouth with a small chin, which will follow the lower curve of the oval.

Use the horizontal and vertical lines to guide your neck attachment, and a line running from the chin to give the back outline of the face.

Don't forget to draw the other ear.
